

Advised Mobile Health App on Media Response to Potential Subpoena

December 12, 2022

Epstein Becker Green (EBG) advised a European mobile-based health-tracking application on how to respond to media questions on whether and how the company would respond to a subpoena if its user data was sought by law enforcement to enforce abortion laws. EBG also provided counseling on whether and how a company could challenge a subpoena and on data management strategies (i.e. anonymizing data, whether a company can be forced to re-identify, etc.).
